An innovative web developer with around 7 years of experience building stable, testable, and easily maintainable large-scale responsive websites and Single Page Applications in insurance, investment management, public sector and business services industries.

Technical skills

HTML, CSS, Bootstrap, JavaScript, TypeScript, Angular, NgRx, Ionic, React, Redux, Node.js, MongoDB, Git, Docker

Work experience

Front end developer, Pitney Bowes – April 2019 to present (Noida, India)

Pitney Bowes is a global technology company most known for its mailing equipment and services, and e-commerce.

- Implemented a number of key functionalities in Spectrum Spatial Analyst – a web mapping application including annotations, login, Google Maps integration, and address search.

- Developed several reusable Angular directives and components keeping unit testing in mind including a folder selection dialog with lazy loading functionality.

- Contributed to Spatial Manager – an application used to configure Spectrum Spatial Analyst including the ability to configure watermark images for Analyst, and WMS and TMS configuration.

- Developed several stages for Flow Designer – an application for transforming business data.

- Created a starter application based on the company's latest Design System showcasing its features.

- Containerized the application with Docker to host on the company's cloud platform.

- Setup CI/CD pipelines on Gitlab.

Front end developer, Publicis.Sapient – March 2018 to March 2019 (Noida, India)

Publicis.Sapient is a Consulting as well as marketing company providing various services to its clients.

- Helped a client in transforming their website built with HTML + CSS + JS (jQuery) to one built on a CMS (Adobe Experience Manager6.2).

- Implemented analytics on the website using DTM (Dynamic Tag Management) which is a part of the Adobe Marketing Cloud for tracking visitors.

- Worked on the creation of a Single Page Application (SPA) based on Angular 4 - a dashboard for tracking the assets of users.

- Created forms using template-driven and reactive approaches to engage the users, validated user actions on the client-side and provided responsive feedback.

Full stack web developer, Accenture – October 2014 to February 2018 (Bangalore, India)

Accenture is a leading global professional services company, providing a broad range of services and solutions in strategy, consulting, digital, technology and operations.

- Developed a major portion of claims processing section for an insurance giant.

- Worked on the development of a hybrid mobile application (for iOS and Android) based on Ionic 1 that helped with mindfulness. I was responsible for the management of downloaded files along with other features.

- Developed several REST services in Node.js using the Express framework that were consumed by a collection of applications on various platforms.

- Created a basic logger utility in Node.js for keeping track of the application status.

Side projects

- UnitCon: This is a unit conversion application for Windows Phone developed on C# (https://www.microsoft.com/en-us/p/unitcon/9nblggh08zpd).

- Reminder: An application built with Angular that can be used to send messages to various platforms. (https://reminder619.firebaseapp.com/)

- Rajatkhare.com: My portfolio website that I built when I was learning Angular 2.

Education and certificates

- 2010 - 2014 Bachelor of Technology in Computer Science, Uttar Pradesh Technical University (UPTU)

- Oracle Certified Associate Java 8 Programmer, 2016 (246148841OCAJSE8)
